Mr Michal Kajan

born on 13.03.2002, from the sending organisation Stredná priemyselná škola stavebná -
Építőipari Szakközépiskola, Konkolyho 8, Hurbanovo, Slovakia participated in the framework of
Erasmus+ program from November 24th until December 14th, 2019 successful the project

„Smart Home - innovative trends in vocational education“

project number 2019-1-SK01-KA102-060452.

Within this project, he completed an internship in CAD, network and smart home at Projekt korrekt in Leipzig. He familiarised with the basics of CAD technology, typical functions and application areas. The focus was on the result-oriented usage of tools and settings as well as scaling and spatial dimensions. Also he was introduced into the world of networking, the structure of LAN, WLAN or GSM and the configuration. Mr Kajan assembled cat5E cables, installed the components and tested the proper network function with the Filius software. For a smart home installation he learned the technological basics and created an overall concept for a house, installed sensors and actuators, programmed the controller and carried out live tests with debugging.

Mr Michal Kajan has familiarised with working methods and organisation in Germany. He learned to find solutions for problems independently and to communicate with employees in a solution-oriented way. With the daily communication in English and German he was able to improve his language skills. He completed all work tasks independently and paid attention to the quality of the results.

He was able to combine his acquired knowledge with his existing skills and future career plans in the context of the current European labour market. During guided city tours in Leipzig, Dresden, Berlin and a visit at BMW plant in Leipzig Mr Kajan got interesting facts about German culture, history and local developments. So he gained a deeper understanding about the opportunities and possibilities of the European Union. VITALIS as recipient organisation got to know Mr Michal Kajan as an open-minded and friendly personality. We were very satisfied with his active participation in the project and wish him all the best for his personal and professional future.

Ms Nikolett Katonová

born on 17.08.2002, from the sending organisation Stredná priemyselná škola stavebná -
Építőipari Szakközépiskola, Konkolyho 8, Hurbanovo, Slovakia participated in the framework of
Erasmus+ program from November 24th until December 14th, 2019 successful the project

„Smart Home - innovative trends in vocational education“

project number 2019-1-SK01-KA102-060452.

Within this project, she completed an internship in CAD, network and smart home at Projekt korrekt in Leipzig. She familiarised with the basics of CAD technology, typical functions and application areas. The focus was on the result-oriented usage of tools and settings as well as scaling and spatial dimensions. Also she was introduced into the world of networking, the structure of LAN, WLAN or GSM and the configuration. Ms Katonová assembled cat5E cables, installed the components and tested the proper network function with the Filius software. For a smart home installation she learned the technological basics and created an overall concept for a house, installed sensors and actuators, programmed the controller and carried out live tests with debugging.

Ms Nikolett Katonová has familiarised with working methods and organisation in Germany. She learned to find solutions for problems independently and to communicate with employees in a solution-oriented way. With the daily communication in English and German she was able to improve her language skills. She completed all work tasks independently and paid attention to the quality of the results.

She was able to combine her acquired knowledge with her existing skills and future career plans in the context of the current European labour market. During guided city tours in Leipzig, Dresden, Berlin and a visit at BMW plant in Leipzig Ms Katonová got interesting facts about German culture, history and local developments. So she gained a deeper understanding about the opportunities and possibilities of the European Union. VITALIS as recipient organisation got to know Ms Nikolett Katonová as an open-minded and friendly personality. We were very satisfied with her active participation in the project and wish her all the best for her personal and professional future.

Ms Fekete assembled cat5E cables, installed the components and tested the proper network function with the Filius software. For a smart home installation she learned the technological basics and created an overall concept for a house, installed sensors and actuators, programmed the controller and carried out live tests with debugging.

Ms Tifani Fekete has familiarised with working methods and organisation in Germany. She learned to find solutions for problems independently and to communicate with employees in a solution-oriented way. With the daily communication in English and German she was able to improve her language skills. She completed all work tasks independently and paid attention to the quality of the results.

She was able to combine her acquired knowledge with her existing skills and future career plans in the context of the current European labour market. During guided city tours in Leipzig, Dresden, Berlin and a visit at BMW plant in Leipzig Ms Fekete got interesting facts about German culture, history and local developments. So she gained a deeper understanding about the opportunities and possibilities of the European Union. VITALIS as recipient organisation got to know Ms Tifani Fekete as an open-minded and friendly personality. We were very satisfied with her active participation in the project and wish her all the best for her personal and professional future.

Ms Regina Kuzslik

born on 11.02.2002, from the sending organisation Stredná priemyselná škola stavebná -
Építőipari Szakközépiskola, Konkolyho 8, Hurbanovo, Slovakia participated in the framework of
Erasmus+ program from November 24th until December 14th, 2019 successful the project

„Smart Home - innovative trends in vocational education“

project number 2019-1-SK01-KA102-060452.

Within this project, she completed an internship in CAD, network and smart home at Projekt korrekt in Leipzig. She familiarised with the basics of CAD technology, typical functions and application areas. The focus was on the result-oriented usage of tools and settings as well as scaling and spatial dimensions. Also she was introduced into the world of networking, the structure of LAN, WLAN or GSM and the configuration. Ms Kuzslik assembled cat5E cables, installed the components and tested the proper network function with the Filius software. For a smart home installation she learned the technological basics and created an overall concept for a house, installed sensors and actuators, programmed the controller and carried out live tests with debugging.

Ms Regina Kuzslik has familiarised with working methods and organisation in Germany.
